

LOCATION OF MATERIAL SAFETY DATA SHEETS

Material Safety Data Sheets, also known as Safety Data Sheets are required to be available to all laboratory researchers as well as emergency responders. Many labs will maintain a binder of the paper copies of the MSDS as they arrive with the chemical from the manufacturer. However, an online source for MSDS is also acceptable as long as the source is readily available (on a computer with a reliable internet connection and connection to a printer). If an MSDS is not provided when a chemical is received, a copy can be requested from the manufacturer or distributor.

MSDS for chemicals located in laboratories _____ (*list all associated labs*) can be found at _____ (*Lab or office location*).

OR

MSDS for chemicals located in laboratories _____ (*list all associated labs*) can be found online at _____ (*online web address*) and can be accessed on a computer located _____ (*office or lab location*) and printed readily upon inspection or in the event of an emergency.
